## SUMMARY

Fresh graduate in Informatics Engineering (GPA 3.74/4.00) with a focus on Data Analytics. Experienced in executing end-to-end data analysis projects using Excel, SQL, Python, and Power BI. Covering data cleaning, exploratory data analysis (EDA), data modeling (star schema), and interactive dashboard development. Delivered concrete business insights from FMCG, tourism, and agriculture datasets. Ready to contribute as a data-driven Junior Data Analyst.

## TECHNICAL SKILLS

**Analisis Data:** Data Cleaning & Transformation, Exploratory Data Analysis (EDA), Data Visualization, Business Intelligence, Insight Statistical Analysis & Reporting

**Tools & Software:** Microsoft Excel (Pivot Table, XLOOKUP, Dashboard), Power BI (DAX, Power Query, Star Schema), SQL / MYSQL / SQLITE, Python (Pandas)

**Teknis Lain:** PHP, HTML, CSS, Flask

## DATA ANALYSIS PROJECTS

### FMCG Sales Performance Dashboard Mar 2026

- Built an ETL pipeline using SQL and Python (Pandas): 10-step data cleaning covering deduplication, type casting, category normalization, and missing value handling on 20,000+ rows of data.
- Analyzed sales performance of 20,000 FMCG transactions; identified Food category as the top revenue driver across all channels (Offline IDR 114M, Toko Hijau IDR 108M, Toko Oren IDR 110M).
- Identified top customer (Eka: 416 transactions, IDR 17.76M) using Python groupby aggregation as the basis for a loyalty program.
- Built an FMCG Sales Performance Dashboard in Power BI with DAX measures (Total Revenue IDR 294M, 7,000 orders, 93 customers), 5 visualizations, and 2 interactive slicers.

### Indonesia Tourism Destination Analysis Feb 2026

- Built a star schema data model with 4 tables (437 destinations, 300 users, 10,000 reviews, 100 tour packages) using one-to-many relationships in Power BI.
- Performed data cleaning and transformation with Power Query; created DAX measures for average rating, average price, and value index.
- Uncovered key insight: price does not strongly correlate with rating low-price destinations can have competitive ratings (avg 3.07); Yogyakarta and Bandung ranked as cities with the most destinations.
- Built a 3-page interactive dashboard (Destination Performance, User Behavior, Business Value Analysis) with category, city, and price range slicers.

### Grocery Store Sales Analysis Dashboard Feb 2026

- Processed and cleaned grocery transaction data; added Grand Total and Disc Category (6 tiers) calculated columns using IFS formulas.
- Answered 10+ analytical questions using AVERAGEIF, SUMIF, SUMIFS, COUNTIFS, and Pivot Tables covering platform segmentation, monthly trends, and top-10 products.
- Built an Excel dashboard with 4 KPI scorecards, 5 charts, 3 interactive slicers, and 1 timeline; identified Brand A Rice as the highest-revenue product among the top 10.

### Livestock Population Analysis – Central Java 2019–2024 Feb 2026

- Integrated and cleaned 6 annual dataset files (2019–2024) from the Central Java Data Portal; conducted EDA across 35+ regencies/cities for livestock population growth patterns per commodity.
- Identified Broiler Chicken as the commodity with the most significant growth (+416 million units in 2024); Demak Regency as the primary production hub (34% share); produced 5 strategic business recommendations.

## WORK EXPERIENCE

### Data Entry | A&A Parts

Sep 2021 - 2022

- Managed and updated 60+ product listings; monitored order and inventory data to ensure daily operational accuracy.
- Recorded and validated daily sales transactions with a high degree of accuracy on operational data.

## EDUCATION

### Bachelor of Informatics Engineering | Universitas Pamulang

Agu 2021 – Sep 2025

- GPA: 3.74 / 4.00
- Thesis & Journal: Implementation of a Decision Support System to Identify High-Achieving Students Using the MFEP Method (Case Study: PPTQ Darussunnah Parung Bogor).

### MSIB Batch 6 – Certified Independent Study | Orbit Future Academy (PT. Orbit Ventura Indonesia) Feb – Juli 2024

- Completed full AI Project Cycle: Data Acquisition, Data Exploration, Data Modelling, Evaluation, and Deployment.
- Developed a website-based customer service chatbot ("BengBOT") for a Yamaha motorcycle repair shop using an LSTM algorithm with TensorFlow/Keras, achieving 99% training accuracy.
- Built an NLP preprocessing pipeline: punctuation removal, lemmatization, tokenization, padding, and label encoding.
- Deployed a Flask application with public hosting via Ngrok; designed UI/UX in Figma and implemented it using HTML, CSS, and JavaScript.
- Served as UI/UX Designer, Frontend Developer, and Backend Developer in a 6-person cross-university team.

## CERTIFICATIONS & TRAINING

- Bootcamp Data Analyst (Excel, SQL, Python, Power BI) | KarirNex, 2026
- Intensive Bootcamp MS. Excel Specialist (Batch 6) } KarirNex, 2026
- Bootcamp Data Analyst - Special Skill Indonesia | Special Skill Indonesia, 2026
- Sertifikasi Kompetensi Pemrograman } LSP UNPAM, 2025
- AI 4 Jobs - MSIB Kampus Merdeka Cycle 6 | PT. Orbit Ventura Indonesia, 2024

## ACTIVITIES

### Microsoft Excel Trainer | Community Service Program (PKM) – SMP Falatehan Serpong

Nov 2023

- Developed and delivered basic Excel training materials for 7th-grade students; guided 15+ participants in data processing and basic mathematical operations.
